### Issue Highlight: Foodborne Illnesses Peak in Summer

The CDC reports 1 in 6 people in the U.S. get sick every year from contaminated food and drinks.

- Foodborne illnesses are often caused by Campylobacter, E.coli and Salmonella (see Figure 1)
- Common symptoms: nausea, vomiting, diarrhea and fever
- These diseases are diagnosed with stool testing

#### Ways to prevent foodborne illnesses

- Avoid eating raw or undercooked meat, eggs and seafood
- Wash all fruits and vegetables (including melons before cutting)
- Wash surfaces and hands often!

### Mosquito Surveillance in June

In the first week of June, weekly mosquito surveillance began at four trapping sites in the Town of Sullivan. Mosquitoes are collected and submitted weekly for testing to detect mosquito-borne diseases that may pose a threat to human health.

- Madison County collected 6,960 mosquito specimens during surveillance in weeks 1-4.
- As of 6/30/18, no mosquito-borne illness has been detected in Madison County.

**Surveillance Results, as of 6/30/18**

Number of mosquitoes collected	Percent change from same time period (previous 3-year avg.)	Number of submitted mosquito pools
6960	+19%	60
